about Turmaks

index

solutions

FIELD HOSPITAL - LEVEL 2

This is the most common, optimized version of field hospitals in terms of capacity, medical capabilities for mid term use, with easy deployment.

FAST SUPPORT HOSPITAL

It is designed to be deployed in a short period of time. It has basic diagnostical and surgical capabilities with necessary inpatient capacity. To achieve that it is composed of autolift expandable containers and inflatable tents.

FIELD CLINIC - LEVEL 1 / 1+

Level 1 clinics are suitable for first aid and stabilization of the patients. Due to their smaller size, they are easy to deploy.

ONE-PLUS-ONE

This is a very fast solution to meet the emergency surgical needs. Needing only one truck for transport, it consists of an auto-lift expandable container, a trailer and an inflatable tent.

Turmaks offers wide variety of solutions. There are some basic structural elements that covers most of our designs; containers, tents, trailers and prefabrications. All these elements can be used in different variations to meet the beneficiaries' needs, changing the construction method and making it more stationary or mobile.

TRAILER - ON WHEELS

It is a very mobile stand-alone solution with a trailer attached on a truck. Having a standard width but length can vary 6 meters to 13.50 meters. The expanding rooms can be adapted in order to increase capacity. More than one trailers can be designed to be used as a set.

PREFABRICATED

This is a very similar solution to commonly known prefabricated buildings. Difference comes from Turmaks' expertise in hospital and accommodation environments and more importantly offering a turn-key solution with all the systems and equipments included.

CONSTRUCTION

Turmaks was founded as a construction company and that comes in prominence in hospital projects or other construction projects.

OTHER - CUSTOMIZED

Other than offered standard solutions Turmaks can manufacture turn-key systems according to special conditions and requirements.
